Project Job Distribution

Project Title: Eco-friendly Travel Planner

Occ No: 3

Team No (Retrieved it from Online Excel Sheet): 4

No.	Name	Student ID	Team leader (√)
1.	HENG YI KANG	23072925	√
2.	NURUL FARZANA BINTI ANUAR	23001346	
3.	WONG WEI LI	23083203	
4.	NUR AISYA QISTINA BINTI MOHD HAZLI	23002100	
5.	AQIL AMANI BIN MISNI	23001941	
6.	YONG YUNG KANG	23093547	

Instructions:

- Copy the features listed in the project title selected by your team.
- All members must be involved in web application design and development tasks (CANNOT work on report/presentation only).
- Assign at least one member in charge of this feature.
- If you plan to have additional features, you may add them into this table.

Features and Member(s) in charge

No	Module	Feature	Feature - Brief Description	Member(s) in charge
1.	General	Register new user account	Enables new users to create an account within the system.	Yi Kang
2.		Login	Authenticates credentials to grant users access to personalized features.	Yi Kang
3.		Logout	Log the user out and terminate the current session.	Yi Kang
4.		Manage sessions	Handles active user states, ensuring secure timeouts and persistent login across the application.	Yi Kang
5.	Profile Management	View profile	Allows users to display and modify their personal information and preferences.	Yi Kang
6.		Update profile		Yi Kang
7.		Delete/Deactivate User Account	Provides the functionality to permanently delete a user account and associated data.	Yi Kang
8.		Change password	Dedicated interface for users to update or reset their passwords.	Yi Kang
9.	Eco-friendly Directory Module	Sustainable Directory	A curated database of eco-conscious accommodations, dining, and transport.	Jayden
10.		Geo-Specific Search	Filterable search engine to find green options by city or town.	Jayden

WIF2003 Web Programming
Semester 2, Session 2025/2026

11.		Favorites System	Allows users to bookmark specific eco-friendly options for future reference.	Jayden
12.	Green Itinerary Module	Itinerary Creator	A scheduling tool to build a date-specific travel plan using selected green options.	Weili
13.		Smart Recommendations	An AI-driven engine that suggests low-impact destinations based on budget, interests, and real-time weather.	Weili
14.		Weather Integration	Integration with a weather API to provide real-time forecasts for chosen destinations.	Weili
15.	Carbon Footprint Module	Emission Calculator	Quantifies the carbon impact of flights, car travel, and lodging choices.	farz
16.		Impact Insights	Visualizes data to show users the specific environmental cost of their travel.	farz
17.		Offset Integration	Provides actionable suggestions and links for carbon credit purchases or emission offsets.	farz
18.	Community Impact Module	Eco-Reviews & Ratings	Allows users to rate the "green-ness" of locations and leave feedback on sustainable practices they witnessed.	aqil
19.		Community Challenges	Gamified features where users earn badges or points for reaching "Low Carbon" milestones or completing eco-tasks.	aqil
20.	Analytics and Reporting Module	Personal Impact Dashboard	A visual summary of total carbon saved over time compared to traditional travel methods	alisya
21.		Sustainability Reports	Generates downloadable PDF summaries of a trip's environmental footprint for corporate or personal records.	alisya
22.		Goal Setting	Allows users to set annual "carbon budgets" for their travels and receive alerts as they approach their limit.	alisya

Additional information (e.g. scope, assumption):

(NOTE: You may add any scope/assumptions defined for your project here)

- Scope:
 - o Geographic Coverage: The system will focus on major global tourist hubs (e.g., top 100 eco-friendly cities) rather than providing exhaustive data for every village or remote location globally.
 - o Booking Limitations: The system serves as a planner and directory, not a booking engine. It will provide links to external booking sites but will not process financial transactions for hotels or flights.

WIF2003 Web Programming
Semester 2, Session 2025/2026

- o Language: The initial release will support English only, with a responsive web-based interface optimized for both desktop and mobile browsers.
- Assumption:
 - o User Honesty: It is assumed that users will provide accurate data regarding their travel habits (e.g., car engine type or flight class) for the Carbon Footprint Calculator to be effective.
 - o Eco-Certification Trust: The system assumes that "eco-friendly" labels provided by third-party directories or service providers are valid and does not perform independent on-site audits.
 - o Internet Connectivity: The application is assumed to be an online-first platform, requiring a stable internet connection to fetch directory updates and weather information.
